Task 9

```python
my_tuple=(1,2,3,4,5,4,3,2,1,2,3,4,5,5)
counting_ele=2
result_count=0

for model in my_tuple:
    if model==counting_ele:
        result_count+=1
print("after counting ele in tuple=",result_count)
```

Task 10

```python
name = ("hari",'sangeetha',"latha")
age= (16,19,25,32)
result=sum(age)
avg=result/len(age)
print("averge of age=",avg)
```
